In recent times, research in the area of pharmaceutical and biology or medical sciences is fast growing. This may be due to the increasing incidences of various diseases influenced by climate and lifestyle changes as well as the resistance of infectious-disease causative organisms to the existing drugs. In addition, there are still many diseases without efficacious drugs for their treatment while the existing agents could have shortcomings such as adverse effects, unaffordability, high cost, etc. Further, there has been some interest lately on the discovery of the mechanisms for certain disease progression while the mode of action of some drugs or therapeutics has not been properly understood. These have generated a huge interest in researches geared towards proper understanding of disease states and novel drug discovery.

These researches should be made available publicly to educate the scientific community, the readers and other researchers on the latest discoveries about diseases and their treatment. This will encourage further research in these directions and enhance the proper utilization of various therapeutic agents by the practitioners and patients for the treatment of various diseases.

Despite the existence of a plethora of journals in the field of pharmaceutical, biological, medical or allied sciences, many research outputs are still neither published nor submitted for publication. Some reasons for non-publication could be that the research is a preliminary study, or it is of poor quality and easily rejected by good journals. Others could be that some journals take quite a long time (several months or even years) to take a decision on a submitted paper. High cost of some open access or subscription-based journals is also a contributory factor. Unpalatable or non-encouraging remarks by some reviewers are also some of the reasons cited by some authors for non-publication of their findings or non-submission to some journals.

A good journal should give timely and constructive (as opposed to destructive) feedback to the authors, without compromising on the quality of research. Money or article processing fee (APC) should not be the criteria for manuscript acceptance and the cost should be quite affordable to majority of the authors from diverse backgrounds. Use of novelty alone as a criterion for paper acceptance may still not be healthy for scientific research as some studies benefit better when validated by other authors.

The journal, Advanced Pharmaceutical and Biomedical Letter (AdvPBL), is established to provide a platform for the dissemination of quality research findings in the field of pharmaceutical, biological and medical sciences. The journal intends to provide timely and constructive feedback to authors about their submitted papers. For the start, the journal intends to publish any submitted and accepted paper free of charge. However, with time, a low article processing fee would be charged since it is an open access journal. Acceptance of manuscripts will be based on scientific quality of the paper, not ability to pay. The journal maintains high scientific quality while discouraging publication malpractices such as plagiarism, redundant publication, ghost or guest authorship. The journal is available online.

Authors are encouraged to submit their quality manuscripts on all areas of pharmaceutical and allied sciences to the Advanced Pharmaceutical and Biomedical Letters (AdvPBL). Global authors from diverse geographical regions are encouraged to submit articles. Authors are encouraged to read the Instructions for Authors and follow the guidelines in preparing and submitting their papers.

It is envisaged that the journal will be of immense benefit to the readers, patients, and researchers in the areas of pharmaceutical, biology, chemical, medical, nursing, allied sciences and related disciplines.

Adv Pharm Biomed Lett (AdvPBL)

Publish your work in this journal

Advanced Pharmaceutical and Biomedical Letters (AdvPBL) is an international, peer-reviewed, open access journal covering all aspects of pharmaceutical and biomedical research. The journal ensures a timely and fair peer-review system. Articles are published on continuous basis shortly after acceptance with little or no waiting period before publication.
